Tutorial for LLM Verification Tool

Merging

Verification

Step 1: Open the Verify Tab

In the LLM Provenance Verification Tool, open the Verify tab.

LLM Provenance Verification Tool

Merge Receipts

Verify

Verify a Record

Upload a record and its receipt. Optionally upload the referenced files to additionally check their content (Level 2).

Record

Drag & Drop or Click to Upload

Receipt

Drag & Drop or Click to Upload

Files (optional)

Drag & Drop or Click to Upload

Download Public Key

Verify

Step 2: Upload the Record and Receipt

Drag and drop or click to upload the record file you downloaded from the LLM Provenance Logger (a single record, or a batch_record.json), then do the same for the matching receipt file (or batch_receipt.json) just below it.

Verify a Record

Upload a record and its receipt. Optionally upload the referenced files to additionally check their content (Level 2).

Record

Drag & Drop or Click to Upload

Selected: batch_record.json

Receipt

Drag & Drop or Click to Upload

Selected: batch_receipt.json

Step 3: Upload the Original Files (Optional)

If the record references any attached files, you may upload them here to additionally check their content. This is Level 2 verification.

Skipping this step still allows Level 1 verification, which checks only the signature against the record.

Files (optional)

Drag & Drop or Click to Upload

Selected: 2606.17851v1.pdf, 2606.17927v1.pdf, 2606.18005v1.pdf, 2606.18122v1.pdf, 2606.18000v1.pdf, 2606.17872v1.pdf, 2606.18168v1.pdf, 2606.18142v1.pdf, 2606.17888v1.pdf, 2606.18120v1.pdf, 2606.17962v1.pdf, 2606.18024v1.pdf, 2606.17847v1.pdf, 2606.18223v1.pdf, 2606.18003v1.pdf, 2606.17972v1.pdf, 2606.17856v1.pdf, 2606.17910v1.pdf, 2606.17904v1.pdf, 2606.18114v1.pdf, 2606.17952v1.pdf, 2606.18021v1.pdf, 2606.18068v1.pdf, 2606.18063v1.pdf, 2606.17867v1.pdf, 2606.18154v1.pdf, 2606.17961v1.pdf, 2606.18096v1.pdf, 2606.17889v1.pdf, 2606.17996v1.pdf, 2606.17979v1.pdf, 2606.17915v1.pdf, 2606.18192v1.pdf, 2606.18181v1.pdf, 2606.17897v1.pdf, 2606.18193v1.pdf, 2606.17989v1.pdf, 2606.18075v1.pdf, 2606.18135v1.pdf, 2606.17887v1.pdf, 2606.18235v1.pdf, 2606.18033v1.pdf, 2606.18101v1.pdf, 2606.18098v1.pdf, 2606.17871v1.pdf, 2606.18092v1.pdf, 2606.17978v1.pdf, 2606.18132v1.pdf, 2606.18156v1.pdf, 2606.17950v1.pdf

Step 4: Download the Public Key

Click Download Public Key if you want to independently verify the signature yourself outside of this tool.

Download Public Key

Step 5: Click Verify

Click Verify to check the uploaded record and receipt.

Verify

Step 6: Successful Verification

If the signature matches and any uploaded files match their recorded hashes, the tool displays a success message describing whether this was a complete Level 2 verification, a Level 1 only verification, or a partial Level 2 verification.

✓ Complete Level 2 Verification

Signature is valid AND all 50 referenced file(s) match.

batch 8b0864f3 signature valid (50 item(s)) · mode: batch

Step 7: Failed Verification

If the signature does not match the record, or an uploaded file does not match anything recorded, the tool displays a failure message explaining which check failed.

✗ Verification Failed

The signature does not match the record (Level 1 failed).

batch 8b0864f3 signature INVALID (50 item(s)) · mode: batch

Step 8: Partial Level 2 Verification

If the signature is valid but only some of the referenced files were uploaded, the tool reports a partial Level 2 result, listing how many of the referenced files matched.

✓ **Level 1 Verified + Partial Level 2**

Signature is valid and 4 of 50 referenced file(s) matched. Upload the remaining file(s) for complete Level 2.

batch 8b0864f3 signature valid (50 item(s)) · mode: batch

Definitions

Record

A record is the published file containing the prompt, output, model, timestamp, and hash for a single request, or the items array for a batch.

Receipt

The receipt contains the cryptographic signature generated over a record's hash (or, for a batch, over the combined batch hash).

Level 1 Verification

Level 1 checks only that the signature matches the record's hash. It does not require any of the original attached files.

Level 2 Verification

Level 2 additionally checks that uploaded files match the file hashes stored in the record, confirming the original attachments were not swapped.

Public Key

The public key is used to verify that a record's signature was produced by the witness's secret key.

Merged Record

A merged record is a new record combining the LLM requests from several already signed records or batches under one new signature.
